

Bravo Series | BVS Moulding Sprayers

Inside view of BRS/4

BVS/4 Sprayer with 6 Spray Guns

The Bravos Series Sprayers are designed and built for the automatic spraying of mouldings and linear work-pieces. It is a very flexible machine capable of utilizing a full range of solvent and waterbased coatings, including; lacquers, stains, primers, sealer and top coats.

The In-Feed Belt System uses a PLC (programmable logic control) system with a photo cell that detects the work-piece and automatically triggers the spray guns on and off as the moulding goes through the spray chamber. This guarantees an accurate and uniform finish on the moulding. An infinitely variable feed speed adjustments helps to meet all of your production requirements.

An additional benefit of the spray cabin design is the easy access to the overspray recovery bins. These bins are removable from the front side, allowing for full access for cleaning and the removal of reclaimed materials. A full range of Models are available from 3 guns to 8 guns, to meet any customer's needs.
