

Bravo Series | BRV Vacuum Coater

**Coats all 4 sides.
99% transfer efficiency!**

	BRV-200	BRV-300
Max. Working Width:	8"	12"
Min. Working Length:	16"	16"
Feed Speed:	30 - 300 FPM	30 - 300 FPM
Vacuum Producers:	(2) 7.5 HP	(3) 7.5 HP
Coating:	Water and UV	Water and UV

The Bravo Series Vacuum Coater features high production output and an extremely high transfer efficiency of 99% for priming, staining, and finishing. Models are available for both waterbase and UV coatings.

The Vacuum System utilizes a set of templates and a coating chamber to apply coatings to the select sides of the work-pieces. The Vacuum units then remove the excess coating as the work-piece exits the coating application chamber. The result is a very accurate multisided uniform finish. All of the excess coating is then drawn into the reservoir, filtered, and pumped back into the application chamber with virtually no paint waste.

Features:

- All Stainless Steel Construction
- Pneumatic Auto Drain
- Vacuum Gauge for Pressure Control
- High Capacity Double Diaphragm Pump
- Robust Double Hold-Down Rollers
